Renderplas PVCu beads are compliant with all relevant British and European standards and they have been tested by the British Board of Agrément which certifies that they meet appropriate performance tests and are fit for purpose in all aspects and in all situations of external rendering.

This declaration of conformity is issued under the sole responsibility of Renderplas Ltd as manufacturer of Renderplas PVCu Beads, identified by the labelling of the packaging in which they are contained.

Daniel Leedham-Green
(Managing Director)

[Bewdley, 18 September 2026]

Scope of declaration

Harmonised European Standards have been compiled to provide a common technical language and offer uniform assessment methods of the performance of construction products. The Construction Products Regulation (EU) No 2024/3110 (CPR) lists the harmonised European standard (hEN) or a European Technical Assessment (ETA) which contains the European Assessment Document (EAD) that details the performance data that is to be reached when carrying out testing. Manufacturers are then obliged to make their results available as a declaration of performance (DoP). The manufacturer, by drawing up this DoP, assumes the responsibility for the conformity of the construction product with the declared performance.

Regulation (EU) No 305/2011 and Directive 89/106/EEC (CPD) have been superseded.

European Assessment Documents

A full list of titles can be found on the European Commission website at:

http://ec.europa.eu/growth/single-market/european-standards/harmonised-standards/construction-products/index_en.htm

At present there is no hEN or ETA for PVCu beads for rendering, plastering or dry lining. In the absence of a European Assessment Document (EAD) that details the testing requirements, Renderplas declare their performance against the design standard mentioned below.

British Board of Agrément certification

In the absence of an applicable EAD, Renderplas has used an independent testing and accreditation body to certify that all of our external render beads are compliant with "BS EN 13914-1:2016 – Design, preparation and application of external rendering and internal plastering: External rendering" as shown in the Bibliography on page 11 of our BBA certificate. Furthermore, the BBA also carry out various relevant performance tests of their own including impact and pull-off tests to assess the suitability of all products for use in construction. Certificate number 11/4823.
